Description and Main functions

- With 8 wired input (zones), 10 wireless zones; Enable to program open/closed alarm of digital inputs by SMS.
- Enable to work with strobe siren, door/window open sensor, Movement sensors,etc.
- Digital inputs are adopted optical-coupled isolators, which can prevent external high voltage from destroying internal components.
- Send SMS automatically to report the state of host everyday when host is normal status.
- Send SMS to 3 preset mobile phone numbers while alarming.
- Auto-dial 3 preset phone numbers while alarming and monitor the sound at site.
- Enable to arm/disarm and program the system by wireless keyboard and SMS
- Enable to call the mainframe at any time and listen what happened in the alarm area.
- Modify zone name and check status of alarm mainframe by SMS.
- Switch to Backup rechargeable battery when power is failure or cut by intruder.
- External power failure alarm: when the system checks out that there is something wrong with the external power or the external power is off for more than 2 seconds, it will send SMS to preset mobile phone immediately
- With password protection function
- Can send alarm signals to monitoring center through GSM network, such as the police station.

Another version of G-3 is enable to add GPS tracking Functions for tracking the location of ATM when lost.

Alarm System and Alarm Monitoring Software configuration

Description for above configuration: The hardware IIT-008 connect to the host of PC with a RS232 series cable and the software installs in the PC for displaying the alarm information from the alarm system, such as user 1, user 2,

Center monitoring software consists of software and Hardware:

Software: IIT-BC110. When the software received the alarm information, it will show the user name, alarm type, alarm time and alarm address etc some detail information. User can control or manage any alarm system via the center monitoring software.

Hardware: IIT-008 GSM alarm receiver mainly used to convert the receiving GSM SMS data and calling into standard RS232 communication protocol for secondary development and utilization.

IIT-008	GSM Alarm Receiver
	<p>Description and Main functions</p> <ul style="list-style-type: none"> ● IIT-008 GSM Alarm Receiver mainly finishes the functions that receive GSM SMS data and voice, and transfer them into standard RS232 serial port. It can submit the SMS data and voice to computer by connecting the RS232 serial port of GSM data module and computer. ● Use together with IIT-ABC110 Monitoring Center Software ● One GSM Alarm Receiver can manage numberless GSM alarm systems. ● It is better for one GSM alarm receiver to manage 200 to 500 GSM alarm devices. <p>US\$160</p>
IIT-ABC110	Centre Monitoring Software
	<p>Monitoring Center Software, Use together with IIT-008</p> <p>The software is a kind of professional and integrated platform to receive alarm information, which adopts GSM SMS, voice and telephone to receive alarm information first. It is practically used on the alarm center where the police are on duty. There are lots of functions of this alarm system include receiving alarm information, building database of users, storing voice phone of alarm, GSM SMS, printing alarm details in time...etc. This software is easy to learn and use.</p> <p>Customers can upload your own the map of alarm system installation address</p> <p>US\$160</p>
